

# IRACORE

ADVANCING WEAR TECHNOLOGY

## FLOTATION

Iracore® products are produced using proprietary compounds designed specifically for flotation applications. Iracore's "OEM fit" design and high quality construction insures the highest recovery rates in the industry. Iracore® has been manufacturing flotation equipment for the mining industry for over 30 years. Our experience and design capabilities allow for customization to any new or existing flotation cell.

## INCREASE RECOVERY

Premature wear and poorly designed flotation parts will not only increase maintenance, downtime, and replacement costs, but also cause a decrease in product recovery. Iracore® flotation equipment has shown a 2 to 3 times wear life over other urethane and rubber manufacturers.
